JOURNAL OF ELECTROANALYTICAL CHEMISTRY AND INTERFACIAL ELECTROCHEMISTRY, VOLUME 243 (1988)

SUBJECT INDEX

Alumina,
carbon composite electrodes containing ———, layered double hydroxides and zeolites (Shaw, Creasy) 209
Ammonium acetate,
electrodeposition of lead on copper in acidic ——— solutions (Barradas et al.) 435

Bismuth,
irreversible structure sensitive adsorption step in ——— underpotential deposition at platinum electrodes (Clavilier et al.) 419
Brightener,
effect of ——— on copper plating: an in-situ investigation by the PAS technique (Yoshihara et al.) 475
Bromide,
study of the electrosorption of ——— and iodide ions on gold using the quartz crystal microbalance (Deakin et al.) 343

Carbon composite electrodes,
——— containing alumina, layered double hydroxides and zeolites (Shaw, Creasy) 209
CE mechanism,
kinetic currents in normal pulse polarography (NPP). Current–potential curves for an electrode process with a preceding chemical reaction (———) (Galvez, Park) 263
Charge transfer,
pulse polarography: influence of amalgam formation on the current–potential curves in normal pulse polarography, reverse pulse polarography, differential normal pulse polarography and differential pulse polarography for a slow ——— step (Galvez et al.) 241
Clay-modified electrodes,
polypyrrole–——— (Rudzinski et al.) 367
Complex chemical reactions,
analysis of electrochemical reactions followed by series or ——— (Scott) 1
Electrodeposition of lead on ——— in acidic ammonium acetate solutions (Barradas et al.) 435
Copper,
effect of brightener on ——— plating: an in-situ investigation by the PAS technique (Yoshihara et al.) 475

Differential normal pulse polarography,
pulse polarography: influence of amalgam formation on the current–potential curves in normal pulse polarography, reverse pulse polarography, ——— and differential pulse polarography for a slow charge-transfer step (Galvez et al.) 241
Differential pulse polarography,
pulse polarography: influence of amalgam formation on the current–potential curves in normal pulse polarography, reverse pulse polarography, differential normal pulse polarography and ——— for a slow charge-transfer step (Galvez et al.) 241
Diffusion-controlled electrodeposition,
voltammetric response for the ——— onto growing hemispherical nuclei (Pritzker) 57

Electronic work functions,
calibration of the Kelvin vibrator for measurements of ——— in a humid atmosphere (Doblhofer, Cappadonia) 337
Electron transfers,
competitive homogeneous chemical reactions occurring between two ———. Application to *p*-nitrophenol reduction (Heras et al.) 293
Fast sweep cyclic voltammetry at ultra-microelectrodes. Evaluation of the method for fast ——— kinetic measurements (Andrieux et al.) 321
Exchange diffusion,
——— in one dimension. Liquid electrolytes and mixed conductor membranes (Buck) 279

Ferrocene,
electrochemistry in near-critical and supercritical fluids. Part VI. The electrochemistry of ——— and phenazine in acetonitrile between 25 and 300 °C (Crooks, Bard) 117
Flow-field throw,
hydrodynamic effects of surfactants on the macromorphology of electrodeposited zinc and flow visualization. The ——— (Jaklić) 21
Flow visualization,
hydrodynamic effects of surfactants on the macromorphology of electrodeposited zinc and ———. The flow-field throw (Jaklić) 21

p-Gallium arsenide,
electrochemistry of alkaline $K_3Cr(CN)_6$ solutions at ——— (Van den Meerakker) 161
Glassy carbon,
surface modifications with heteropoly and isopoly oxometalates. Part II. Electrocatalytic behaviour of ——— surfaces modified with 17-tungsto, 1-molybdo-diphosphate (Keita et al.) 105
Gold,
study of the electrosorption of bromide and iodide ions on ——— using the quartz crystal microbalance (Deakin et al.) 343

Hemispherical nuclei,
voltammetric response for the diffusion-controlled electrodeposition onto growing ——— (Pritzker) 57
Heteropoly oxometalates,
surface modifications with ——— and isopoly oxometalates. Part II. Electrocatalytic behaviour of glassy carbon surfaces modified with 17-tungsto, 1-molybdo-diphosphate (Keita et al.) 105
Surface modifications with ——— and isopoly oxometalates. Part I. Qualitative aspects of the activation of electrode surfaces towards the hydrogen evolution reaction (Keita, Nadjo) 87
Hydrogen,
real standard potential on the aqueous ——— scale of the silver/silver chloride electrode in methanol: the surface potential of methanol (Barraclough et al.) 353
Spectroscopic identification of the adsorbed intermediate in ——— evolution on platinum (Nichols, Bewick) 445
Surface modifications with heteropoly and isopoly oxometalates. Part I. Qualitative aspects of the activation of electrode surfaces towards the ——— evolution reaction (Keita, Nadjo) 87
Hydroxides,
carbon composite electrodes containing alumina, layered double ——— and zeolites (Shaw, Creasy) 209
2-Hydroxy-3-phenyl-6-methylpyrazine,
electrochemical behaviour of pyrazine derivatives: reduction of ——— (Nuñez-Vergara et al.) 133

Intramolecular association,
the role of ——— in the electrochemical reduction of viologen dimers and trimers (Imabayashi et al.) 143
Iodide,
study of the electrosorption of bromide and ——— ions on gold using the quartz crystal microbalance (Deakin et al.) 343
Ionic transfer,
kinetics of ——— across adsorbed phospholipid layers (Cunnane et al.) 455
Iron,
electrochemical reduction of oxygen on passive ——— in alkaline solutions (Calvo, Schiffrin) 171
Isopoly oxometalates,
surface modifications with heteropoly and ———. Part II. Electrocatalytic behaviour of glassy carbon surfaces modified with 17-tungsto, 1-molybdo-diphosphate (Keita et al.) 105
Surface modifications with heteropoly and ———. Part I. Qualitative aspects of the activation of electrode surfaces towards the hydrogen evolution reaction (Keita, Nadjo) 87

Kelvin vibrator,
calibration of the ——— for measurements of electronic work functions in a humid atmosphere (Doblhofer, Cappadonia) 337

Lead,
electrodeposition of ——— on copper in acidic ammonium acetate solutions (Barradas et al.) 435
Liquid/liquid interface,
compensation for ohmic drop in the measure-

ment of the potential difference at a ——— by the step current method (Pang et al.) 81

Manganese dioxide,
in-situ Raman spectroscopy of ——— during the discharge process (Lopez de Mishima et al.) 219
Methanol,
real standard potential on the aqueous hydrogen scale of the silver/silver chloride electrode in ———: the surface potential of methanol (Barraclough et al.) 353
Mirage effect,
——— in photoelectrochemistry (Decker, Fracastoro-Decker) 187

Near-critical fluids,
electrochemistry in ——— and supercritical fluids. Part VI. The electrochemistry of ferrocene and phenazine in acetonitrile between 25 and 300 °C (Crooks, Bard) 117
p-Nitrophenol,
competitive homogeneous chemical reactions occurring between two electron transfers. Application to ——— reduction (Heras et al.) 293
Normal pulse polarography,
kinetic currents in ——— (NPP). Current–potential curves for an electrode process with a preceding chemical reaction (CE mechanism) (Galvez, Park) 263
Pulse polarography: influence of amalgam formation on the current–potential curves in ———, reverse pulse polarography, differential normal pulse polarography and differential pulse polarography for a slow charge-transfer step (Galvez et al.) 241

Ohmic drop,
compensation for ——— in the measurement of the potential difference at a liquid/liquid interface by the step current method (Pang et al.) 81
Oxometalates,
distribution of ——— on polymer-covered electrodes: compared catalytic activity of these new polymers and the corresponding oxometalates in solution (Keita et al.) 481
Surface modifications with heteropoly and isopoly ———. Part II. Electrocatalytic behaviour of glassy carbon surfaces modified with 17-tungsto, 1-molybdo-diphosphate (Keita, Nadjo) 105
Surface modifications with heteropoly and isopoly ———. Part I. Qualitative aspects of the activation of electrode surfaces towards the hydrogen evolution reaction (Keita, Nadjo) 87
Oxygen,
electrochemical reduction of ——— on passive iron in alkaline solutions (Calvo, Schiffrin) 171

PAS technique,
effect of brightener on copper plating: an in-situ investigation by the ——— (Yoshihara et al.) 475
Phenazine,
electrochemistry in near-critical and supercritical fluids. Part VI. The electrochemistry of ferrocene and ——— in acetonitrile between 25 and 300 °C (Crooks, Bard) 117
Phospholipid,
kinetics of ionic transfer across adsorbed ——— layers (Cunnane et al.) 455
Platinum,
chemical modification of ——— electrodes by tetra(4-pyridyl)porphyrin through siloxane polymer formation (Marrese et al.) 193
Irreversible structure sensitive adsorption step in bismuth underpotential deposition at ——— electrodes (Clavilier et al.) 419
Spectroscopic identification of the adsorbed intermediate in hydrogen evolution on ——— (Nichols, Bewick) 445
Study of HSO_4^- and SO_4^{2-} co-adsorption on a ——— electrode in sulphuric acid by in-situ FT-IR reflection absorption spectroscopy (Kunimatsu et al.) 203
Polyamine,
indirect electroorganic reactions mediated by multivalent metal ion–macrocyclic ——— complexes (Takiguchi, Nonaka) 393
Polymer-covered electrodes,
distribution of oxometalates on ———: compared catalytic activity of these new polymers and the corresponding oxometalates in solution (Keita et al.) 481
Polypyrrole,
———–clay-modified electrodes (Rudzinski et al.) 367
Polythiophene,
spectroelectrochemical study of the electrodeposition of ——— films (Hillman, Mallen) 403

Potassium hexacyanochromate,
electrochemistry of alkaline ——— solutions at p-GaAs (Van den Meerakker) 161
Pulse polarography,
———: influence of amalgam formation on the current–potential curves in normal pulse polarography, reverse pulse polarography, differential normal pulse polarography and differential pulse polarography for a slow charge-transfer step (Galvez et al.) 241
Kinetic currents in normal ——— (NPP). Current–potential curves for an electrode process with a preceding chemical reaction (CE mechanism) (Galvez, Park) 263
Pyrazine,
electrochemical behaviour of ——— derivatives: reduction of 2-hydroxy-3-phenyl-6-methylpyrazine (Nuñez-Vergara et al.) 133
Pyridine-4-aldehyde,
global analysis of kinetic current in dc polarography. Application to ——— reduction (Blázquez et al.) 309

Quartz crystal microbalance,
study of the electrosorption of bromide and iodide ions on gold using the ——— (Deakin et al.) 343

Raman spectroscopy,
in-situ ——— of manganese dioxide during the discharge process (Lopez de Mishima et al.) 219
Reverse pulse polarography,
pulse polarography: influence of amalgam formation on the current–potential curves in normal pulse polarography, ———, differential normal pulse polarography and differential pulse polarography for a slow charge-transfer step (Galvez et al.) 241

Scanning tunneling microscopy,
——— at potential controlled electrode surfaces in electrolytic environment (Lustenberger et al.) 225
Series chemical reactions,
analysis of electrochemical reactions followed by ——— or complex chemical reactions (Scott) 1
Siloxane,
chemical modification of platinum electrodes by tetra(4-pyridyl)porphyrin through ——— polymer formation (Marrese et al.) 193
Silver,
real standard potential on the aqueous hydrogen scale of the ——— /silver chloride electrode in methanol: the surface potential of methanol (Barraclough et al.) 353
Sodium hydroxide,
electrochemical behaviour of tungsten in alkaline media. Part I. ——— solutions (Ortiz et al.) 379
Step current method,
compensation for ohmic drop in the measurement of the potential difference at a liquid/liquid interface by the ——— (Pang et al.) 81
Sulphuric acid,
study of HSO_4^- and SO_4^{2-} co-adsorption on a platinum electrode in ——— by in-situ FT-IR reflection absorption spectroscopy (Kunimatsu et al.) 203
Superconductor electrodes,
electrochemistry at $YBa_2Cu_3O_7$ ——— at temperatures above T_c (McDevitt et al.) 465
Supercritical fluids,
electrochemistry in near-critical and ———. Part VI. The electrochemistry of ferrocene and phenazine in acetonitrile between 25 and 300 °C (Crooks, Bard) 117
Surfactants,
hydrodynamic effects of ——— on the macromorphology of electrodeposited zinc and flow visualization. The flow-field throw (Jaklić) 21

Tetra(4-pyridyl)porphyrin,
chemical modification of platinum electrodes by ——— through siloxane polymer formation (Marrese et al.) 193
Tungsten,
electrochemical behaviour of ——— in alkaline media. Part I. NaOH solutions (Ortiz et al.) 379
17-Tungsto, 1-molybdo-diphosphate,
surface modifications with heteropoly and isopoly oxometalates. Part II. Electrocatalytic behaviour of glassy carbon surfaces modified with ——— (Keita et al.) 105

Ultra-microelectrodes,
fast sweep cyclic voltammetry at ———. Evaluation of the method for fast electron-transfer kinetic measurements (Andrieux et al.) 321

Viologen,
the role of intramolecular association in the electrochemical reduction of ——— dimers and trimers (Imabayashi et al.) 143

$YBa_2Cu_3O_7$,
electrochemistry at ——— superconductor electrodes at temperatures above T_c (McDevitt et al.) 465

Zeolites,
carbon composite electrodes containing alumina, layered double hydroxides and ——— (Shaw, Creasy) 209

Zinc,
hydrodynamic effects of surfactants on the macromorphology of electrodeposited ——— and flow visualization. The flow-field throw (Jaklič) 21
